

SHADE STRUCTURES

W-TRUSS

It's hard to improve on our most popular shade structure, but we've done it again. The W-Truss now comes with the original flat roof option for shade, three peaked styles for shade, and a new canopy cover for year round use on the peaked roofs – and an even stronger frame!

Shade structures are one of the most economical ways to keep customers and products out of the blazing sun and our new canopy option has you covered for rain or snow! Mix and match flat roof sides with a peaked canopy entryway for maximum customer comfort and visual appeal to the front or side entrance to your brick and mortar store. Freestanding 20' wide canopy sections can be gutter connected for multiple peaks or linked together in a row to cover an area up to 100' long. Call a customer representative today to find a configuration that matches your needs!

W-Truss Standard Packages Include:

3" x 3" Sq. 12 ga. vertical posts with 7" x 7" base plates in 20' x 20' blocks, expansion anchor bolts, 20' galvanized truss members, knitted shade cloth with taped edges and grommets, 10" canopy ball bungee every 18", fittings, hardware, and assembly instructions
