

# Agribon™

## Advanced technology and designs to address agricultural applications by region and climate

- Wide variety of protective agricultural covers to protect against insects and frost
- World-class quality and service
- Easy to order and install

### Temperature Control

Everyone talks about the weather. With Agribon, you can do something about it! Depending on the weight, Agribon can provide up to 8° F of freeze and frost protection. This means inclement weather, like early or late season frosts, are less of a threat for damage. Agribon can help you jump-start your growing season by providing more suitable micro-climate protection to sensitive seedlings. Row covers also give added protection for overwintering container stock. Sensitive ornamentals and vegetables alike prosper when protected by Agribon.

Agribon is a porous membrane that allows air and water to pass through, creating an exceptional micro-climate control to produce healthier, stronger plants. The smooth, multi-directional construction of Agribon allows the row covers to move with the wind. They stay in place while protecting your crops.

### Light Filtration

Filtering sunlight helps optimize crop and nursery stock growth. With Agribon, you can choose the degree of light filtration appropriate for your crops and climate. Our high-quality row covers are enhanced with a UV ray stabilizer, prolonging use and providing extended plant protection.

### Pest Deterrent

Agribon helps protect your young plants from unwanted advances from insects and wildlife. Our seamless row covers shield plants from a variety of aphids, beetles, and thrips.

Advanced Agricultural Protection
